TGI 3 Deep Search Project: development and testing of new and improved methods of exploring for deeply buried base-metal deposits

Neil Rogers
Geological Survey of Canada, 601 Booth St, Ottawa, ON, Canada K1A 0E8

The TGI 3Deep Search Project is a thematic, multidisciplinary and collaborative project with the primary objective of developing, testing and applying new and innovative methods of exploring for base-metal deposits concealed at depth in the Earth’s crust. The Government of Canada instigated the TGI 3 research program to conduct mapping to help sustain the base-metal reserves around existing mining communities. To this end a series of regional projects were established for some of Canada’s major base-metal regions, such as the Central Mobile Belt of Newfoundland. In complement to these projects, the
