Toya-Usu Global Geopark is a volcanic geopark located in Hokkaido in northern Japan. There are major farms producing vegetables and fruits in this area, and the land the crops are grown on contain a moderate amount of alkaline ash and pumice from the Toya volcano and the Usu volcano. Therefore, the soil is well suited for cultivation, with a balanced pH and good runoff of water. There are also forests in various transition stages around Mt. Usu. This produces bio-diversity with each environmentally accepted creature due to frequent disturbance and restoration by the eruptions of Usu volcano in recent years.

Because of this, we can find a lot of hidden tales “Geo-Stories”, associated with the activity of the living Earth when we focus on the different aspects of local industry, people’s livelihood, and the natural habitats of living things.

In 2014, Toya-Usu global geopark produced the picture book Toya-Usu Global Geopark Storybook in order to comprehend the relationship between the worlds above and under the ground world. It is edited to include easy-to-understand text and illustrations to reach local people of all ages.
