

PETROLEUM GEOLOGY SEMINAR '86 - ABSTRACTS OF PAPERS

The History and Geology of Irong Barat Field

Jawati Abu Naim, Esso Production Malaysia Inc., Kuala Lumpur.

Irong Barat field is the seventh field offshore Peninsular Malaysia, to be developed by Esso Production Malaysia Inc. The structure is a complexly faulted anticlinal feature at the westernmost end of the Tapis-Irong anticlinal trend. Eleven exploration wells were drilled in the field between February 1979 to February 1982 and fifteen development wells were drilled from the A Platform from September 1983 to October 1984. The field produces oil mainly from Middle Miocene Group H reservoirs.
