

Exmouth West 2D Survey Complete

Searcher Seismic and partners Fugro and Gardline have completed the Exmouth West non-exclusive 2D seismic survey.

4260 km of 2D seismic data has been acquired over the frontier blocks W08-21 and W08-22 which were released by the Australian Government in the 2008 Offshore Petroleum Acreage Release.

The Exmouth West 2D Non-Exclusive Seismic Survey data is scheduled to be fully processed and ready for delivery by early November.

Searcher and Fugro have also completed the Exmouth West 2D reprocessing project.

This reprocessing consists of 4268 km of 1978, 1979 and 1994 vintage 2D seismic data. A full

suite of gathers, offset stacks and AVO products are now available for delivery.

Searcher Seismic Managing Director Odd Larsen commented, "This newly acquired seismic data, combined with the reprocessing, will provide industry leading seismic coverage to evaluate the potential of gazettal blocks W08-21 and W08-22 in the highly prolific Carnarvon Basin." ■
